Geochim. et Cosmochim. Acta

EDITORS

DR. L. H. AHRENS, *Department of Geology and Mineralogy, The University, Oxford, England.*

PROF. C. W. CORRENS, *Sedimentpetrographisches Institut der Universität, Lotzestr. 13, Göttingen, British Zone, Germany.*

DR. E. INGERSON, *Geochemistry and Petrology Branch, U.S. Geologicla Survey, Washington 25, D.C., U.S.A.*

DR. S. R. NOCKOLDS, *Department of Mineralogy and Petrology, The University, Cambridge, England.*

PROF. F. A. PANETH, F.R.S., *Max-Planck-Institut für Chemie, Mainz, Saarstrasse 23, Germany.*

PROF. L. R. WAGER, F.R.S., *Department of Geology and Mineralogy, The University, Oxford, England.*

PROF. F. E. WICKMAN, *Naturhistoriska Riksmuseets, Mineralogiska Avdelning, Stockholm 50, Sweden.*

I. GENERAL

1. Papers on Geochemistry should be submitted to the editors for the appropriate country or language (*Papers on Cosmochemistry should be sent to Prof. F. A. Paneth, F.R.S.*). Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. The preparation of progress reports and review articles will be invited by the Editors from time to time. The Journal will appear as independent and complete numbers, which will be sold separately and combined into volumes of about 300 pages.

2. Only papers which have not been previously published will be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta.*

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned.

II. MANUSCRIPT REQUIREMENTS

1. The manuscript must be written in one of the three official languages, English, French, or German.

2. The manuscript should be an original typewritten copy (not a carbon). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Half-tone illustrations should be restricted to the minimum necessary. They should accompany the manuscript mounted on separate sheets. Line drawings that require to be re-drawn should include all relevant details. Photographs should be enlarged sufficiently to permit their clear reproduction in half-tone. If words or numbers appear in photographs, two copies are requested, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should accompany the manuscript on a separate sheet.

4. Only such references to literature should be given as are referred to in the text and should be denoted by quoting the author's name and date of publication, e.g. AHRENS (1952). Literature references are to be listed together at the end of the manuscript and not given as footnotes. All references should be listed alphabetically according to the Harvard system:

AHRENS, L. H. (1952) *Geochim. et Cosmochim. Acta* **2**, 168

and should include the standard abbreviated title of the journal, year, volume number and page number.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

CONTENTS

Nos. 1/2

Page

HIROSHI ONISHI and E. B. SANDELL: Geochemistry of arsenic . . . 1

HERBERT H. UHLIG: Contribution of metallurgy to the origin of meteorites. Part II —The significance of Neumann bands in meteorites 34

RALPH STAIR: The spectral-transmissive properties of some of the tektites . . 42

G. J. WASSERBURG and R. J. HAYDEN: A^{40}–K^{40} dating 51

F. E. SENFTLE and J. T. BRACKEN: Theoretical effect of diffusion on isotopic abundance ratios in rocks and associated fluids 61

HOWARD A. POWERS: Composition and origin of basaltic magma of the Hawaiian Islands 77

Book review:

"Chemical Analyses of Spanish Rocks" by J. M. FUSTER, E. IBARROLA and M. P. LOBATO (reviewed by TOM F. W. BARTH) 108

Announcement 108

Nos. 3/4

DONALD L. GRAF and JULIAN R. GOLDSMITH: Dolomite-magnesian calcite relations at elevated temperatures and Co_2 pressures 109

EVILLE GORHAM: On some factors affecting the chemical composition of Swedish fresh waters 129

CLAIRE C. PATTERSON: The Pb^{207}/Pb^{206} ages of some stone meteorites . . . 151

GEORGE EDWARDS and HAROLD C. UREY: Determination of alkali metals in meteorites by a distillation process 154

S. J. THOMSON and K. I. MAYNE: The ages of three stony meteorites and a granite 169

JACK GREEN and ARIE POLDERVAART: Some basaltic provinces 177

A. E. RINGWOOD: The principles governing trace element distribution during magmatic crystallization 189

Book reviews:

"Isotope Geology" by K. RANKAMA (reviewed by L. H. AHRENS) 203

"Petrology for Students. An introduction to the study of rocks under the microscope" by ALFRED HARKER (reviewed by L. R. WAGER) 204

Nos. 5/6

RICHARD G. BADER: Carbon and nitrogen relations in surface and subsurface marine sediments 205

JULIAN R. GOLDSMITH, DONALD L. GRAF and OIVA I. JOENSUU: The occurrence of magnesian calcites in nature 212

EVILLE GORHAM: On the acidity and salinity of rain 231

STURE LANDERGREN: A note on the isotope ratio $^{12}C/^{13}C$ in metamorphosed alum shale 240

A. E. RINGWOOD: The principles governing trace element behaviour during magmatic crystallization. Part II—The role of complex formation 242

P. M. JEFFERY, W. COMPSTON, D. GREENHALGH and J. DE LAETER: On the carbon-13 abundance of limestones and coals 255

IRVING A. BREGER and JAMES M. SCHOPF: Germanium and uranium in coalified wood from upper Devonian black shale 287

L. H. AHRENS: The convergent lead ages of the oldest monazites and uraninites (Rhodesia, Manisota, Madagascar and Transvaal) 294
